

Large UK Hotel Chain uses CyBot pen testing

A global luxury hotel chain uses CyBot, Being global, they require a global solution that would identify potential threats to their key assets 24/7

COMPANY SUMMARY

The Hotel Chain is an international brand of luxury hotels and resorts worldwide.

Deal Size: 4000 IP

CHALLENGES

The hotels under the chain operate on a global level, each location with its own security policy and its own language. The hotel found this to be a weakness in their network security. Annual human pen testing was not enough as hackers still managed to find their way in. The hotel chain was looking for an alternative that is more efficient, works 24/7 and performs globally.

SOLUTION

Cronus Cyber Technologies has developed the CyBot, the first automated penetration testing solution that can deploy globally and mimics human ethical hackers that work 24/7, provide a map of global attack path scenarios so you can fix only the vulnerabilities that matter. The CyBots Pro's were installed in the hotel chain and our value was immediately shown.

BENEFITS

- Global operation
- In-house IT can manage the CyBot, not need to outsource penetration testing
- Continuous operation 24/7 that matches today's dynamic and cloud based environment.
- Actionable business and security insights
- Competitive pricing on SaaS model
- Intuitive dashboard
