

How data of customer is secured in MSSP machine

Ver 1.0

- ✓ Machine is being Pen Tested once per 4 months with good results
- ✓ Data that we store on the machine cannot be recognized by any outside customer person (just internal IP without any explanation)
- ✓ CyBot contains all the vulnerability records data need for different scanners at Inner Database, no user's personal data is saved from any of the scanners processes
- ✓ All data is encrypted using industry standards best practices in order to ensure maximum data safety
- ✓ The code is encrypted with AES256 encryption
- ✓ We create unique repository which contains all hosts and equipment with its relevant vulnerabilities, CVEs and information
- ✓ This repository is encrypted
